

# Neomades Mobiles Lab

*When the application is generated, it should be tested in order to validate the quality of the application...*

*There is a question : How to test over the whole mobile phone market or a set of representative mobile phones ?*

*"... Neomades Mobiles Lab has been created to answer to it..."*

## **+ 600 mobile phones**

The center has more than 600 mobile phones Java ME, Blackberry, Android the more representative of the European market.

## **Handset information**

A database is available to give information for each mobile phone : technical characteristics, capabilities.

Testers could read a knowledge database to know good practice for each phone.

## **Technical infrastructure**

A server is set in order to upload applications, mobile phones could download it with real conditions.

## **Who need it ?**

The **Neomades Mobiles Lab** is opened to everyone : companies, marketing companies, application editors, developers, testing companies... who want :

- analyzing quickly the feasibility, market coverage of an application
- testing efficiently and simply their applications over a wide range of mobile phones.
